DEEZA CHASSIS PARTS BREAKS GROUND FOR NEW PRODUCTION PLANT

280,000 sq. ft. facility will nearly double company's capacity; slated for Fall 2012 completion

Totowa, NJ - Deeza Chassis Parts, a technology focused manufacturer of premium chassis parts for the global aftermarket, has broken ground on a new 280,000 sq. ft. production plant in Turkey. At an estimated cost of \$6 million, the new facility is scheduled for completion in the fall of 2012 and will nearly double the company's production capacity. Gokhan Kuru, president, Deeza Chassis Parts, announced that the company will also invest in new tooling for the facility.

"After a long and difficult world economic and business climate, we see an improvement in the market along with a major increase in demand for our premium quality chassis parts in both Europe and USA," said Kuru. "As a result, our current production plant is very close to being fully utilized. Until the new plant goes into production, we will use expanded labor and work hours to compensate for this. With its enhanced capabilities, our new facility will position us for future market and competitive challenges."

Kuru says Deeza Chassis Parts in the USA and its parent company Disa Automotive Ltd. in Turkey will continue to make future investments, as they have during the last 20 years, to facilitate the production of quality chassis parts. The company currently produces four million parts per year. Once the new facility is operational, the company expects capacity to initially increase to six million parts per year.
